

### **Assignment 3:**

You must make an assignment like Lab 5, where you'll be automating the website (ex: linkedIn, youtube, login page of any other website).

1. You can write code in any language using selenium
2. You can use amazon.ca website too but not what we discussed in class
2. I need the code pushed in the github repo under the name of the folder: Assignment 3
3. You need to submit the recording of flow running
4. Atleast 4 elements needs to be tested
5. You can use code from google as well just make sure the elements from HTML are properly placed

Screenshots to be submitted:

1. Submit the screenshot of your file in github under Assignment 3 folder
2. Submit the recording of your code running
